HIGHLIGHTS

The Alberta Dairy Control Board is pleased to present production and sales data for the twelve month period ending July 31, 1997.

Competitive pressures and removal of barriers to interprovincial trade resulted in one plant closure, the opening of two specialized plants and more processing consolidation. Nestle's purchase of the ice cream and frozen dessert business from Agrifoods International Cooperative Ltd. and the purchase of Beatrice Foods Inc. by Parmalat Canada further illustrate the global consolidation of dairy processing.

The number of producers continued to decline. The year ended with 1,058 milk producers, down 4.25%, who delivered 601 million litres of milk, up 2.53%. Average shipments per producer increased 7.08% to 1,557 litres per day. The number of cream producers declined 15% ending with 51. The butterfat content of raw milk averaged 3.6432 down from 3.6863 kilograms per hectolitre.

Quota transfers through the quota exchange declined dramatically. The number of quota swaps increased as did the total amount of quota as producers became more efficient at managing expected production with quota. Total unused market share quota transfers increased to 717,272 kilograms at an average price of \$27.49 per kilogram. Used market share quota transfers amounted to 432,271 kilograms at \$26.60 per kilogram. A total of 93,385 litres of fluid quota transferred at a weighted average price of \$395.21 per litre.

Fluid milk and cream sales increased 2.57% to 310,317,809 litres. Fluid milk sales increased 1.98% and cream sales were up 15.8%. Homogenized milk, 1% milk and skim milk sales increased, while 2% and chocolate milk sales decreased.

The trend from 2 litre pure pak containers to 4 litre plastic jugs continued with 47.22% of all milk and 44.93% of all milk and cream sales in 4 litre plastic jugs.

Western Milk Pooling commenced March 1, 1997. Alberta's class 1 sales are designated sales based on the 35.2% negotiated production base of the Western Milk Pool agreement. Class 1 utilization is now expressed as a percentage of sales plus exclusion divided by total fluid quota. Class 1, 3a, 3b, 4a, 4b and 5 all increased while class 2 production decreased. The increase in class 5 milk utilization from 6.6% to 17.19% had a major impact on lowering average producer income and increased month to month variation.

Component pricing was introduced in Alberta on November 1, 1997. Class 1 milk is purchased from producers and sold to processors and consumers on the basis of butterfat content and skim milk volume in the finished product. Industrial milk is priced on the basis of butterfat, protein and other solids content.

Alberta's share of the national market share quota (industrial milk) continues to decline to 6.39% due to the impact of fluid milk skim-off and the loan of market share quota to B.C., Saskatchewan and Manitoba in the Western Milk Pool. Skim-off is one of the greatest threats to the size of the dairy industry. The Dairy Board and staff are committed to find a resolution to the negative impact of skim-off.

Establishing mechanisms and streamlining the approval for processed dairy product exports were accomplished by the Dairy Board, through cooperation with the industry. Producers and processors who availed themselves of the Optional Export Program contributed to increased production, increased value added processing and increased efficiency of the Alberta dairy industry. During the year, 1.5 million litres of milk were processed and exported through Canada's first Optional Export Program contract. A second contract for 2.5 million litres has been approved.

TABLE 1
NUMBER OF PROCESSORS AND DISTRIBUTORS
AS OF JULY 31

	Number of Processing Plants	Number of Class 1 Processing Plants / Distributors	Number of Distributor Agents/Depots
1994	21	8	94
1995	21	7	73
1996	21	6	89
1997	22	6	n/a *

* Dairy Board Regulation no longer requires distributors to be licensed by the Board.

* Class 1-5 harmonized classification system was implemented August 1996. Cottage cheese was re-classified from class II to class 3a, inventory and plant losses are now reported in class 4 instead of in classes II - IIIC (data was not adjusted for 1994-95 to reflect this change for comparison purposes).
